Description

Oakwood Control's Shooter Display Station with our Precision Electronic Target Software is a ruggedized tablet display for the firing line shooter.

This system is designed to run our Precision Electronic Target Software and pairs perfectly with our H-bar Location Of Miss And Hit system for shooting in a portable package.

Can be used in a portable setting or fixed mounted at the firing line for standard use.

Software

Oakwood's Precision Electronic Target Software (PETS) shows precise locations of hits and misses along with group size, score, and center location.

All shot and group information can be displayed in inch, cm, MOA and MIL.

Notes can be saved for each shot group and sessions can be stored and later retrieved for further review and analysis.
