

# Oakwood Controls

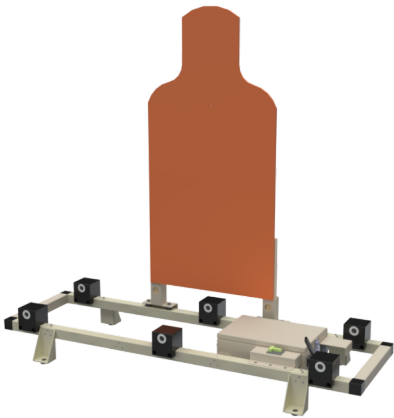

Tactical Performance Systems

## COMPANY OVERVIEW

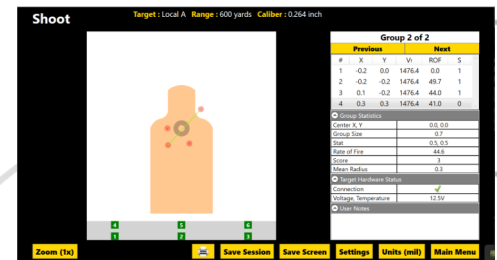

- ❖ Oakwood Controls was founded in 2009 and has evolved from expertise in military sensor technology integration and a passion for long-range precision shooting.
- ❖ Our target systems were born from a real accessibility need and Oakwood has grown into a trusted supplier across the United States and abroad, including the UAE, Saudi Arabia, Singapore, Japan, parts of Europe, and Australia.
- ❖ We specialize in sensor technology and electronic target systems, including lifters, turners, and movers, built for live-fire training, production quality control, and R&D applications.
- ❖ Our primary customers consist of military, DoD, and Special Operations Forces. Well-funded commercial tactical buyers and law enforcement round out our customer base.

## PRODUCT OVERVIEW

### What is a LOMAH H-Bar?

- ❖ LOMAH stands for "Location of Miss and Hit". Rather than only registering a hit on the target itself, the H-Bar detects where a shot lands across the entire target window, including misses, giving shooters and instructors the data to pinpoint exactly where to improve.
- ❖ Shooter data is shown within seconds of pulling the trigger at the firing line on the shooter's laptop or tablet, showing shot location, grouping data, and more.

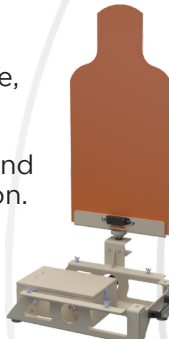

The following systems integrate seamlessly with the LOMAH H-Bar and each other, to give realism to live-fire training scenarios:

The Tactical Target Lifter raises and lowers the target on command for pop-up style engagement.

The Tactical Target Turner rotates the target between face, edge, and back positions, testing a shooter's reaction and target discrimination.

The Mover system travels along a track at set speeds, building shooter accuracy against a moving target.
